Recent Projects

JoinIN Created a full CRUD app that allows users to create a playbook of personal plays. Users may add collaborators to both playbook and plays. Others may also contribute plays to playbooks. Users may call a huddle to meet in person. App operates on one platform, merging clients' offline and online networking needs.

Blontourage Helped client to develop vision of desired website appearance and features. Drew out wireframes and user stories for clarifying project. Used the Bands in Town API to feed real-time data to site. Met with client throughout project using the Agile Process.

Wander Created full CRUD app that utilizes photo collections from Flickr's API to create an album overlaid in Google Maps through their API image. Tracks where photos were taken and shows links to Flickr API and Google API. Acted as Scrum Master and developer, overseeing a team of four developers.

Riders Like Me Created full CRUD app that allows users to create a profile to share with other riders, listing riding experience, interests, and contact information. Users can connect with others by looking through other rider profiles and leaving comments on their pages or contacting them directly through their profile.
